DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: 106.

2. The reference numbers in the specification do not match reference numbers in the drawings for Fig. 7.

Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities: on Page 4, Par. [0016] the reference number for chassis is incorrect.

Appropriate correction is required.

Art Unit: 2835

Claim Rejections - 35 USC § 112

- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 5. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 6. Claim 9 recites the limitations "the tubing" and "the loop interior" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 1, 4, 9, 10-12, 21-23, 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Cheon.

Cheon discloses a cooling apparatus for usage in an electronic system comprising: a liquid loop heat exchanger body 72, 74, 50, 42 configured for attachment to frontal exterior surface of an electronic system chassis 7; a pump P coupled into the tubing and generating a pressure head suitable to drive a cooling fluid interior to the tubing through the loop interior and exterior to the chassis; a cold plate 12 coupled to the tubing and positioned on one or more heat generating component.

Claim Rejections - 35 USC § 103

- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. Claim 3, 7, 8, 13 rejected under 35 U.S.C. 103(a) as being unpatentable over Cheon.

Cheon discloses the claimed invention but does not show the size of the chassis. It would have been an obvious matter of design choice to place the large heat exchanger outside the chassis as disclosed by Cheon, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955). The details drawn to the fin arrangement to have access to indicator lights or other device and hinged tube couplings are well known therefore obvious, and disclosed in the prior art references listed in US PTO Form 892 that is attached but not applied at this time.

11. Claims 14-20 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cheon in view of Fox et al.

Cheon discloses the claimed invention, as shown above, except fans that drive air through the heat exchanger and at least one fan positioned within the chassis. Fox discloses the cooling system including fans providing airflow through the heat exchanger and an individual fan disposed inside the chassis. It would have been

Art Unit: 2835

obvious at the time the invention was made to a person having ordinary skill in the art to provide fans as disclosed by Fox et al. in the device disclosed by Cheon for sufficient cooling. Claim 20 is rejected on the same basis as claim 3 above.

12. Claims 2, 5, 6 rejected under 35 U.S.C. 103(a) as being unpatentable over Cheon in view of Koizumi.

Cheon discloses the claimed invention except a tube segment being positioned interior to the heat exchanger. Koizumi discloses the liquid loop cooling system having the heat exchanger with internally placed tubing. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to have the segment of tubing inside of finned heat exchanger as disclosed by Koizumi in the device disclosed by Cheon as to simplify manufacturing process.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Boris L. Chervinsky whose telephone number is 571-272-2039. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynn D. Feild can be reached on 571-272-2800 ext. 35. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

Art Unit: 2835

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
